

BARRACHINA'S

TECHNICAL INFORMATION

1. CLEANERS

1.1 WATERY CLEANERS

1.1.2 LAVADOR CALZADO

CHARACTERISTICS: It is composed of surfactants, polymers and ammoniacal dissolutions properly formulated. Its aspect is of a milky liquid. It has a great degreasing and decontaminating power in general, but especially on white finishes. It has an advantage over A cleaner by its added capacity of leather conditioning for further operations of finish.

APPLICATION FIELD: In general for any kind of Full-grain or Corrected leather. You will have to be cautious when being informed about a protein finish (caseins, albumins,...) because the ammoniac that the cleaner contains is able to dissolve the proteins fixed with formaline or other fixers and consequently dissolve the proteins that constitute the tanning finish film.

INSTRUCTIONS FOR USE: Some very simple details have to be noticed as they will help us to make a good cleaning. It is better to use an appropriate rag than a sponge, for the dirt dissolved by the cleaner will be more easily dragged. It is convenient to change frequently from a dirty to a clean rag, because it is an usual mistake to use the same rag during too long, and be dirtying instead of cleaning. It is convenient and advisable to use tight-fitting gloves to avoid the continued contact with the skin. It is advisable not only to use tight-fitting gloves to deal with the product, but also have a good ventilation in the work place designed for its use.

SECURITY: Look up the general security section.

Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.
