

TECHNICAL INFORMATION

10. ECO-CREAMS

10.1 SELF-BRIGHTENING ECO-CREAMS

10.1.3 ECO CREMA BOX BL-2000

CHARACTERISTICS:

Mixture of waxes and polymers in a watery media with creamy look, when applied to a shoe it provides a **high, crystal gloss, with a sliding touch.**

APPLICATION FIELD:

The best performance of this cream is achieved when applied over leather in which you want to get a high, crystal gloss over tightly closed full-grain or corrected grain leather, like for example FLORANTIQUE, because due to its thixotropic composition and characteristics, it can be applied very easily without producing scratches or shades over the leather.

INSTRUCTIONS FOR USE:

Once it has been carried out the cleaning of glues and other dirt, apply ECO-CREMA BOX BL-2000. It is convenient to employ proper sponges of high resistance, high density, with very little cells, and soft, and try to spread the product as evenly as possible.

Once the shoe has dried up, after 5-6 minutes approximately, you have to rub first with a horsehair brush, and later with a cotton or wool brush at 500/800 rpm approximately.

SECURITY:

Check the security dossier.

REMARKS:

Our area labs can produce colored ECO-CREAM BOX in any aniline tone if the finish requires it, either to enhance or level the general tone of the shoe.

Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.
