

## TECHNICAL INFORMATION

### 10. ECO-CREAMS

#### 10.2 TO-BE-POLISHED ECO-CREAMS

##### 10.2.3 ECO-CREMA NAPA

**CHARACTERISTICS:**

Mixture of waxes and polymers in a watery media, when applied to the shoe it produces a natural médium and nice gloss with a dry waxy touch, slightly sliding.

**APPLICATION FIELD:**

The best performance of this cream is achieved when applied over napa leather and other leather when you want to achieve a medium napa-like gloss. In some cases it can work out as base or nourishing cream, because it has a good filling power and a good adherence. For example in **CRUST LEATHER** not too open grained.

**INSTRUCTIONS FOR USE:**

After cleaning glues and other dirts, and after having repaired and levelled color if necessary, apply ECO-CREAM NAPA, COLOURLESS OR COLOURED. It is convenient to use proper sponges of great resistance, high density, and little soft cells, always spreading the product as evenly as possible.

One the shoe is dried up, 5-6 minutes approximately, it has to be rubbed with a horsehair brush and later with a cotton or wool brush at approximately 500/800 rpm.

**SECURITY:**

Check the security dossier.

**REMARKS:**

Our area labs can produce colored ECO-CREAM NAPA in any aniline tone if the finish requires it, either to enhance or level the general tone of the shoe.

*Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.*
