

BARRACHINA'S

TECHNICAL INFORMATION

3. REPAIRERS-LEVELERS

3.2 LAPICES REPARADORES DE CERA

CHARACTERISTICS:

They are mixtures of soft natural and synthetic waxes properly pigmented to the desired tone. They are presented as cylindric tubes (sticks) in a suitable shape to be handled easily.

APPLICATION FIELD:

Every kind of leather which has been finished in a tanning factory with resins, waxes and pigments. That is to say, in every kind of leather with a more or less thick tanning finish layer placed on it.

INSTRUCTIONS FOR USE:

When the shoe surface to be finished is clean from glues and other contaminating dirt, the defects the leather has in the shoe vamp are more clearly seen. With the coloured Repairing Sticks ready to use, you will rub on the damaged parts until the scratches are filled up. Another method is to melt the stick wax with a metallic blade sharp end; then fill with it the damaged part and rub with a rag to remove the remaining wax and level all the surface. It is convenient to fix eventually this first reparation with a Liquid Repairer in acrylic base.

SECURITY:

Look up the general security section.

REMARKS:

In our zone laboratories every colour is prepared, so you will have fast solutions to production problems. They are presented in 12 units boxes.

Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.
