

BARRACHINA'S

TECHNICAL INFORMATION

4. GLOSSES

4.1 GLOSSES IN SOLVENT BASE

4.1.3 LUXSOL S-BLN / LUXSOL S-BLN C

CHARACTERISTICS:

Esther of cellulose butirated free of groups nitro, properly formulated in a solvent medium with silicone oils and waxes additives to give a soft and warm touch to leather. Its aspect is of a transparent and bright liquid with the characteristic solvent smell. The gloss obtained in a correct application is of **average-high power** and quite nice touch.

APPLICATION FIELD:

White Full-grain and Corrected leather. It is a great product for **white leather** as light does not make it yellow like the rest of lacquer glosses.

INSTRUCTIONS FOR USE:

After thoroughly cleaning leather from glues and other dirt, and after repairing and leveling if necessary, you will apply Luxsol S-BL N with a spraying gun with a nozzle opening of 1,5 mm., with a 4 atm. pressure and a proper distance to the shoe. The experience tells us the correct distance is from 25 to 35 cm. It is important to have a good application cabin equipped with an extractor fan, water screen and good light. It is convenient to use a protecting mask.

SECURITY:

Look up the general security section.

REMARKS:

It is advisable to clean with Ammoniacal Cleaner and apply a base to leather before gloss application to improve its adherence and aging. In our zone laboratories gloss strength can be modified to get what it is desired in each case.

Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.
