

**BARRACHINA'S**

## TECHNICAL INFORMATION

### 4. GLOSSES

#### 4.1 GLOSSES IN SOLVENT BASE

##### 4.1.4 LUXSOL S-500

#### **CHARACTERISTICS:**

Emulsion of nitrocelulose properly formulated in a solvent medium with silicone oils and wax additives to give a soft and warm touch to leather. Its aspect is of a milky yellow liquid with the characteristic solvent smell. The gloss obtained in a correct application is of **average-high power** and a very soft touch, reminding of **dressmaking Nappa**.

#### **APPLICATION FIELD:**

Full-grain and Corrected leather especially those **Nappa-like leathers with a dressmaking Nappa touch**.

#### **INSTRUCTIONS FOR USE:**

After thoroughly cleaning leather from glues and other dirt, and after repairing and leveling if necessary, you will apply Luxsol S-500 with a spraying gun with a nozzle opening of 1,5 mm., with a 4 atm. pressure and a proper distance to the shoe. The experience tells us the correct distance is from 25 to 35 cm. It is important to have a good application cabin equipped with an extractor fan, water screen and good light. It is convenient to use a protecting mask.

#### **SECURITY:**

Look up the general security section.

#### **REMARKS:**

It is advisable to clean with Ammoniacal Cleaner and apply a base to leather before gloss application to improve its adherence and ageing. When you have a shoe with a combination of Nubuk and Full-grain leather, you can apply Luxsol S-500 to both kinds of leather with satisfactory results. It is advisable, anyway, to ask our technicians about it.
