

BARRACHINA'S

TECHNICAL INFORMATION

4. GLOSSES

4.2 GLOSSES IN WATERY BASE

4.2.8 ECO-UNIVERSAL M-40

CHARACTERISTICS:

Mixture of natural and synthetic waxes with the incorporation of a polymer that have been conveniently formulated to obtain a High Gloss, with a pleasant and slippery touch. It looks like a milky, yellowish liquid with a pleasant smell.

APPLICATION FIELD:

It is applied on aniline leathers of good and medium quality.

INSTRUCTIONS FOR USE:

After thoroughly cleaning leather from glues and other dirt, and after repairing and leveling colours if necessary, you will apply ECO-UNIVERSAL M-40. with a spraying gun with a nozzle opening of 1-1,5 mm. at 4-6 atm. of pressure, and a proper distance to the shoe. The experience tells us the correct distance is from 25 to 35 cm.

These glosses have a good advantage: they improve their effects with a good brushing, using a cotton or wool brush impregnated with our BRIGHTENING WAX at 500 to 800 r.p.m.

It is important to have a good application cabin, equipped with an extractor fan, water screen and good light. It is convenient to use a protecting mask.

SECURITY:

Look up the general security section.

REMARKS:

It is advisable that before the application ECO-UNIVERSAL M-40, a Base is applied to the leather to unify the absorption and improve aging.

Our zone laboratories can give ECO-UNIVERSAL M-40 any **environment-friendly aniline** colour if needed, to enhance or level the shoe general tone.

Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.
