

BARRACHINA'S

TECHNICAL INFORMATION

5. CREAMS

5.2 TO-BE-POLISHED CREAMS

5.2.6 CREMA TURIA

CHARACTERISTICS:

Emulsion of natural and synthetic waxes in a solvent medium, properly formulated with silicone oils to give the leather a soft and warm touch. Its aspect is of a white and very nice cream with a lightly scented white-spirit smell. It is obtained with a correct application **an average-high power gloss** and a very natural nice touch.

APPLICATION FIELD:

Full-grain and Corrected leathers when **a natural "bootblack"-like aspect** and soft touch is needed. It is logical to think that the quantity of product to apply to get the desired gloss will depend on leather absorption.

INSTRUCTIONS FOR USE:

After thoroughly cleaning leather from glues and other dirt, and after repairing and leveling colours if necessary, you will apply colourless or coloured CREMA TURIA with a proper sponge. You will try to reach every corner, back-stitch, and punch to fill, give colour and vigour to leather and place waxes as uniformly as possible. You will wait for a minimum of 4 to 6 minutes, depending on room temperature and humidity, and then brush the shoe with a horsehair brush at 500 to 800 rpm., trying to spread waxes properly. You will finally use a cotton or wool brush impregnated with Brightening Wax at 500 to 800 rpm. to get the desired touch and gloss. It is convenient and advisable this cream to be applied in good ventilation and hand protection conditions to avoid any allergic reaction or irritation.

SECURITY:

Look up the general security section.

REMARKS:

Our zone laboratories will supply you with any coloured Crema Turia. You can make "Antique" effect with these creams properly coloured.
