7.13 GRASA CABALLO CAMPERA/ COW-BOY HORSE GREASE

CHARACTERISTICS: Mixture of oils and greasy touch additives properly formulated in a aqueous medium. Its aspect is of a transparent yellow-white liquid with a greases smell. It brings vigour and darkness to the Suede-like and Nubuk leathers, but it greases them at the same time. The main difference between COW-BOY HORSE GREASE and the other greasing products of our range is the **touch** the leather gets. It is interesting to test every possibility with our technicians before making a definite decision on which is the right product to use.

APPLICATION FIELD: For every leather presented in the shoe market as **GREASED**, the same with Full-Grain, Corrected or Suede-like Split leathers.

INSTRUCTIONS FOR USE: After thoroughly cleaning leather from glues and other dirts (with our NUBUK CLEANER RUBBER), you will apply COW-BOY HORSE GREASE with a proper **sponge**, of high resistance, high density and with very small and soft cells, trying to spread product as uniformly as possible. It is convenient and advisable to apply these greases in good ventilation and hand protection conditions to avoid skin contact, and avoid any allergic reaction.

SECURITY: Look up the general security section.

REMARKS: Our zone laboratories can offer any HORSE GREASE coloured with the desired tone.

Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.
