

BARRACHINA'S

TECHNICAL INFORMATION

7. SPECIAL PRODUCTS

7.3 ENDURECEDOR 3CZ CONC. INC.

CHARACTERISTICS:

Mixture of polymers in liquid state, properly formulated to provide a harder touch to leather. It has the look of a white liquid.

APPLICATION FIELD:

Any type of leather, when it is wanted a harder touch. Its efficiency grows when leather has suffered stretching due to the mechanical action during shoe making.

INSTRUCTIONS FOR USE:

Apply with a paintbrush over the meat side of the leather, once leather cuts have been coined. Then, leather cuts have to be left to dry up, and go on with rest of shoe making process. When leather gets higher temperature in the moulding and oven processes, the polymer reaction is produced, providing leather with a certain hardness and resistance to elongation.

SECURITY:

Look up the security sheets.

Barrachinas cannot control the conditions under which its products are used, therefore do not accept responsibilities concerning the results and/or consequences from its usage.
